

SSI Quality Policy Statement

Shadowens Services, Inc. has tailored its quality system around the needs and expectations of our main customer and their processes. Our main quality tenants are built around ISO 9001 philosophies, while maintaining the ability to tailor this approach to the needs and desires of our customer or sponsors. One of our basic Principles and values is to ensure that no matter the processes or approach used for quality; is to validate that there is always a single point of accountability. We find this strategy to provide the greatest approach for success as we follow our prescribed Project Management Plan (PMP) for engineering, testing and productions processes and procedures. These processes are discussed and agreed to prior to the task Requirements Document being agreed to by our customer before our technical execution begins.
